Document status and date:
Published: 09/01/2019

Document Version:
Publisher’s PDF, also known as Version of Record (includes final page, issue and volume numbers)

Please check the document version of this publication:
• A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher’s website.
• The final author version and the galley proof are versions of the publication after peer review.
• The final published version features the final layout of the paper including the volume, issue and page numbers.

View the article online for updates and enhancements.
There is an incorrect representation of the expression for resistances in parallel in equation (1) in section 4.1 ‘Voltage probe calibration’ on page 6. The numerator and denominator in the equation are reversed and should read:

\[ I = U_C \frac{R_m}{R_m + R_t}. \]

\( R_m \) is the measuring resistor, \( R_t \) the terminating resistor at the oscilloscope and \( U_C \) is the voltage drop across \( R_m \) induced by the current \( I \).

None of the calculations and conclusions of the paper are affected.

The authors apologise for any confusion that this transcription error may have caused.
