Document status and date:
Published: 01/05/2019

Please check the document version of this publication:

• A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
• The final author version and the galley proof are versions of the publication after peer review.
• The final published version features the final layout of the paper including the volume, issue and page numbers.

DOI of original article: https://doi.org/10.1016/j.tim.2018.12.003
(Trends in Microbiology 27, 453–467; 2019)

A mistake was present in an earlier version of the review article ‘RTX Adhesins are Key Bacterial Surface Megaproteins in the Formation of Biofilms’ by Guo et al. The last two sentences of the section ‘Cell-Surface Retention Region: A Calcium-Independent Plug Anchors the Adhesin in the T1SS OMP’ were ‘Intriguingly, although the β-sandwich plug is conserved in the non-RTX adhesin of P. aeruginosa (CdrA), it lacks the T(P)-A-A-G site for proteolysis. Instead, CdrA is retained by a “cysteine hook” that restricts its secretion through the outer-membrane pore [80,81].’ This text should read ‘Intriguingly, although a T-A-A-G site for proteolysis is present in the non-RTX adhesin of P. aeruginosa (CdrA), this protein is retained by a “cysteine hook” that restricts its secretion through the outer-membrane pore via the Type Vb secretion system [80,81].’ This has now been corrected.
