Document Version:
Accepted manuscript including changes made at the peer-review stage

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Key points of the study

- House dust mite faeces are part of indoor particulate matter.
- Indoor particulate matter from beddings is characterised by fluctuations.
- The use of the mean is sufficient to predict the sum of concentrations.
- For sufficiency, aeroallergen measurements should also include information on the peak.
