

Emanuela Bosco is an Associate Professor at Eindhoven University of Technology in the Faculty of the Built Environment, chair of Applied Mechanics and Design. She obtained her MSc degree in Civil Engineering with first-class honors from the University of Brescia (Italy) in 2009 and her PhD in Numerical Methods for Engineering in 2013, for which she was awarded the title of Doctor Europaeus. She next worked as a Post Doc researcher in the group of Mechanics of Materials, Department of Mechanical Engineering at TU/e. She has spent visiting research periods abroad, at Oak Ridge National Laboratory and Massachusetts Institute of Technology, USA, and the University of Santiago de Chile. Her research interest is in the field of computational mechanics, in particular on multi-scale methods applied to fracture, fibrous materials, granular materials, and multi-physics problems.
