

Emanuela Bosco is Assistant Professor at Eindhoven University of Technology in the Faculty of the Built Environment, chair of Applied Mechanics and Design, since 2016. She obtained her MSc degree in Civil Engineering with first-class honors from University of Brescia (Italy) in 2009 and her PhD in Numerical Methods for Engineering in 2013, for which she was awarded of the title of Doctor Europaeus. She has next worked as a Post Doc in the group of Materials Technology, Department of Mechanical Engineering at TU/e . She has spent several research periods abroad, at Oak Ridge National Laboratory and at Massachusetts Institute of Technology, USA. Her research interest is in the field of computational mechanics, in particular on multi-scale methods applied to fracture, fibrous materials and multi-physics problems.
